

Why did you pick this particular organization, institution or individual?

I recently talked with my father and he told me of the problem, and I offered him my help.

How did you identify the problem to solve and why did you pick this problem over others?

I was told that this is a major problem in company during this COVID-19 times. I wanted to help people that have problems due to COVID-19 and I thought this was a good way to do it.

Describe your approach. How did you come up with it? Is it the best possible solution? Why?

My approach is described in my detailed documentation. I think the concept is really a good solution, but I do not think it is the best solution yet, because I think I might have missed something. The current implementation, my website, is definitely not yet the best solution, because many features are still missing because of the limited time of the challenge.

Describe your previous skillset. Did you learn anything new in the past three weeks?

I knew the basics of Java, but nothing yet about web development.

During the challenge I learned frontend development: HTML, CSS and JavaScript with Tailwind and React and I learned backend development with Node.js and Express.js and I setup a database with MongoDB.
